

Hello, and thank you for taking the time to read my cover letter.

I'm a full-stack programmer currently working with Chat and SMS for Quicken Loans. I do some front-end development at my current company but I would prefer to find a role which is more front-end heavy. Prior to focusing on JavaScript I worked with PHP and MySQL. I am also familiar with Mongo, Postgres and Glue Catalog. I sometimes write scripts in Python.

My tech stack includes React, Angular, Vue, Node and AWS. For design I work with HTML, CSS, SASS, Bootstrap and Tailwind.

My workflow tools include NPM, GIT, JIRA, TFS and VS code.

I enjoy a flexible team environment with a combination of focus time and collaboration. I work east coast hours now and I am comfortable with any time zone. I am a US citizen and currently reside in Las Vegas, NV.

I have a BS in Computer Science.
